

Doosan Forklift Part

Doosan Forklift Part - Doosan Infracore Company Ltd. is an international and intercontinental company that consists of Defense Industry Products, Industrial Vehicles, Diesel Engines, Automation Systems, Machine Tools and Construction Equipment.

Their United States affiliate, Doosan Infracore America Corporation, situated in Suwanee, Georgia houses a 170,000 square foot production facility, home to a Compact Equipment and Construction division. Cleveland, Norwalk houses the Lift Truck division, and West Caldwell, New Jersey has a Machine Tool department. The U.S. headquarters in Georgia facilitates a first rate parts operation capable of supplying an excess of 25,000 line items to support Lift Truck, Compact Equipment, Machine Tool and Construction customer requirements.

There are well over 220 Doosan service and product sales locations operating in Canada and the United States. Also, there are more than 90 independent dealers moving forklift equipment and materials handling equipment. This network helps Doosan Infracore America to aggressively compete in this competitive marketplace. The lift truck product line remarkably includes 63 different versions consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion forklifts. Capacities of these various vehicle versions range from 3,000 to 33,000 lbs. All vehicles are built in an ISO 9001 qualified facility.

Doosan Infracore America is the fastest growing lift truck company in the North American marketplace, due to their stability in retaining a high degree of consumer service quality and optimum product functioning to all Doosan Infracore Lift Truck users. The U.S. lift Truck division stationed in Cleveland has a skilled team knowledgeable in Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's original home-based forklift market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. began to import assembled lift trucks as part of a national equipment expansion venture. Initial product sales of this industrialized equipment focused on large business communities, the armed services and on state-run firms. This ultimately led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced business operations throughout Korea to service and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical instruction became the new focus for improving quality and product development.

Daewoo started the first domestic forklift business in 1967, and quickly gained a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's sophisticated technological advancements combined with sales success placed them in a situation of considerable expansion of their lift truck operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to counter act competitive pressures in the US materials handling market. This venture radically expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a new plant which helped establish the company for the manufacture of high added-value goods suitable for export. In 1993, the company had a global sales system and started exporting designs they had developed through in-house expertise, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth possibilities into overseas marketplaces.
